

A REAL APPROACH TO SYSTEM OPTIMIZATION AND COST SAVINGS

Had enough hardware? Forward-thinking organizations can partner with NetCraftsmen to design and deploy software-defined networks that introduce new levels of control, productivity, and agility.

It's not wizardry, it's craftsmanship. We maximize the effectiveness of IT resources, migrating what was once physical to the use of virtual machines. Our intent, whether for a new design or existing system, is optimization of CPU use, memory and storage, improving performance and cost-effectiveness thanks to the virtual hosting environment.

As with every NetCraftsmen solution, innovation is driven by the need to boost the bottom line. Rest assured knowing that the technology, virtual or otherwise, stays focused on ROI.

Virtual Technology Engineered **By Genuine Craftsmen**

Our Virtualization Team Excels in Delivering Real-World Advantages.

- 1. Virtualize your entire server/storage infrastructure**
- 2. Maximize effective use of datacenter CPU, memory, disk and power**
- 3. Leverage innovation and evolving best practices to efficiently design application/server interaction**
- 4. Deploy the needed security, quality of service (QoS), and connectivity**

Through every phase, you get access to years of in-depth network application experience, and always know how your investment supports critical organizational applications.

Keep pace with
technological
evolution,
accessing and
implementing
what's best for
your organization.
